Software Engineer with almost **2 years** of experience building **scalable, cloud-based backend and full-stack applications** using **Java, Spring Boot, Microservices, Angular, and SQL**, with hands-on exposure to **Azure** and GenAI-assisted development workflows, and system design principles.

## Work Experience

### Capgemini

Sep 2024 – Present

*Software Engineer (Java Full Stack Developer)*

- Designed and implemented backend features in **TDD**(Test driven development) mode using **Java, Spring Boot, JPA, and MySQL**, with a strong focus on **modular design**, and performance optimization.
- Identified, remediated, and upgraded **400+ critical and high-severity security vulnerabilities**, including framework upgrades, dependency refactoring, and secure configuration fixes across three enterprise applications.
- Improved code quality, maintainability, and security by refactoring legacy components under tight timelines, including a complete module rewrite, while applying secure coding practices and **Microsoft Entra ID–based authentication** to meet modern compliance standards.
- Utilized **GenAI tools (ChatGPT, GitHub Copilot)** as productivity enablers for debugging, test case generation, and controlled refactoring, improving turnaround time while maintaining code quality under tight SLAs

## Projects

### ShowNight — Spring Boot, PostgreSQL, Redis

Movie Reservation System

- Developed an enterprise-grade RESTful API using Spring Boot 3, Spring Security, and Spring Data JPA with PostgreSQL, implementing **JWT-based authentication, RBAC**, and Liquibase for schema versioning.
- Designed and implemented robust **high-concurrency booking workflows** using transactional boundaries and pessimistic locking mechanisms, effectively preventing race conditions, data inconsistencies, and double-booking.
- Integrated **Redis-based distributed caching** for frequently accessed and read-heavy endpoints, reducing PostgreSQL query load by **40%** and significantly improving overall API response times and system throughput.
- Built **31 end-to-end integration tests** covering authentication, authorization, reservation lifecycle, and concurrent access scenarios, ensuring high confidence in critical business logic and production readiness.
- Documented APIs using SpringDoc OpenAPI (Swagger UI), cutting **frontend integration time by 50%**.

### 1xCar — Spring Boot, Angular, MySQL

Car Dealership and bidding platform

- Built a full-stack platform with a **backend-heavy architecture**, supporting secure authentication, real-time bidding workflows, and seamless handling of **100+ concurrent users** under parallel request loads.
- Implemented **JWT-based authentication** and role-based access control (RBAC) to define clear Admin and User workflows, enforcing authorization boundaries and protecting sensitive application operations.
- Developed a modular and maintainable backend using Spring Boot, JPA, and Hibernate, enabling efficient data persistence, transaction management, and scalable business logic implementation.
- Designed and implemented responsive user interfaces using Angular and Tailwind CSS, ensuring cross-device compatibility while improving usability, accessibility, and overall user experience.

## Education

### Lovely Professional University

*Bachelor of Technology, Computer Science and Engineering, CGPA 8.11*

Punjab, India

July 2020 – June 2024

## Technical Skills

**Programming:** Java, JavaScript, PHP, Python, TypeScript

**Frontend:** Angular, React, HTML5, CSS3, Tailwind

**Backend:** Spring Boot, Spring MVC, Hibernate, JPA

**Databases:** PostgreSQL, MySQL, MongoDB, Firebase

**Cloud / DevOps:** Azure, Docker, Git, GitHub, AWS

**Practices:** OOP, REST APIs, CI/CD, Unit Testing, Agile

## Achievements & Certifications

- Microsoft Certified:** Azure Fundamentals (AZ-900) [🔗](#) and Azure Developer Associate (AZ-204) [🔗](#)
- Generative AI Leader Certification** Issued by Google Cloud [🔗](#)
- Agile Software Development** by University of Minnesota [🔗](#)
